

Anuj Sharma

Innovation-driven Software Quality Engineer with a focus on Quality Engineering (QE), Automation Innovation, and Security. Proven track record of re-engineering quality infrastructure at Motorola Solutions, moving from manual validation to high-velocity BDD frameworks and CI/CD automation. Expert in bridging the gap between functional testing and security engineering.

TECHNICAL SKILLS

- Automation: C# (.NET), Reqnroll (BDD), Appium, Selenium, Allure Reporting, Auth Token Automation.
- DevOps & CI/CD: GitHub Actions, YAML Pipeline Engineering, HeadSpin Cloud Integration.
- Security Engineering: CVE Triaging, SQLi/XSS Automated Testing, Kali Linux, Wireshark.
- Software Development: Java, C++, Python, REST APIs, MVC, JUnit, Git.

DEMONSTRATED SKILLS

- **Technical Leadership:** Proven ability to act as a "Quality Authority," leading technical triages for critical security threats and major client releases.
- **Cross-Functional Influence:** Skilled in collaborating with developers to implement "Shift-Left" strategies, such as standardizing Accessibility IDs to reduce framework maintenance.
- **Mentorship & Knowledge Sharing:** Committed to team growth through the creation of technical documentation and standardized AI (Copilot) instruction sets.
- **Strategic Problem Solving:** Expert at identifying infrastructure bottlenecks and engineering programmatic solutions (API-driven state resets) to improve suite reliability.

PERSONAL INFORMATION

EDUCATION

Studying Bachelor of Software Engineering

RMIT University, Australia

2020-2024

EXPERIENCES

Software quality Engineer (Motorola solutions)

June 2023-Present

- **Framework Architecture:** Orchestrated the migration of the Automation framework to Reqnroll (.NET BDD) and Allure Reporting, improving stakeholder visibility and reducing test maintenance by 30%.
- **Infrastructure Innovation:** Engineered a headless C# Authentication Application to automate token retrieval, enabling programmatic "clean state" resets and reducing manual setup time by 90%.
- **High-Velocity Delivery:** Maintained a high-output development pace (520+ commits), leading major framework overhauls and migration to HeadSpin Cloud device farms.
- **Security Leadership:** Acted as technical lead for triaging and patching **CVSS 9.9 vulnerabilities**. Identified and remediated 7 critical iOS risks through self-initiated security audits.
- **DevOps Excellence:** Developed resilient GitHub Actions pipelines with automated cleanup logic and SMTP/Slack observability integrations to provide the team with real-time app health reports.
- **Release Certification:** Served as the **Primary Quality Authority** for Australian Policing Agencies; conducted deep defect analysis to save development cycles and ensure production stability.
- **AI Integration:** Standardized the use of GitHub Copilot within the QE team, creating shared instruction sets to accelerate team-wide scripting efficiency.

[Available on request]

Cyber Security Intern, Association of Computing Machinery (ACM) 08/2021- 09/2021

Worked as a Cybersecurity Intern, modelled and simulated various cyber security attacks, designed algorithms for various kinds of spoofing attacks and simulated these programs ethically. Also carried out extensive analysis on malware, backdoors and interceptors and **published my findings in IEEE Xplore**.
